The Success of Your Cloud Vision Depends on Supply Chain

GHX Understands Healthcare Supply Chain

Today, healthcare decision-makers are looking for ERPs capable of digitizing HR, financials, supply chain and more—while leveraging the resiliency of the cloud. But many technology partners don't have the healthcare knowledge or supply chain expertise to successfully execute sophisticated integrations with Cloud ERPs to create a seamless experience and avoid disruptions to supply chain.

With more than **60 successful cloud implementations**, GHX is uniquely positioned to unify and integrate supply chain data for optimal performance in your cloud ERP. Based on lessons learned, we've identified a short list of actions you can take to help prepare:

1 Start planning early and create an **item data strategy**

2 Secure a reliable **item data foundation:** A source of truth for every item and its attributes

3 Drive collaboration by bringing together the right people and processes

4 Prioritize change management for smoother adoption

5 Identify ways to capture deeper cost savings upfront

As part of the planning process, also consider how to apply both data and analytics to advance value-based care initiatives and achieve long-term success.

GHX: Leading Healthcare Through Successful Cloud ERP Integrations

Part of an effective cloud ERP migration depends on an IT partner with a solid data foundation, a scalable, interoperable platform and deep healthcare supply chain expertise. With over 20 years in the industry, **GHX has the most cloud integration experience in healthcare.** We have the people, processes, technology and services to not only navigate migration complexities — but also to help optimize your capabilities moving forward.

The right Cloud ERP strategy establishes the interoperability you need to generate better insights. Improve decision making. Optimize performance. Reduce IT spend and organizational risk. **All without extensive partner vetting.**

Checklist to accelerate supply chain success in the cloud with GHX

When planning and budgeting for your Cloud ERP migration, keep the following points in mind.

✓ **Integrate a solid 'data foundation' as part of your item data strategy to set-up supply chain for success in the cloud.**
Incomplete data and siloed or duplicate item records can negatively impact business processes that depend on this shared information about an item in the cloud. So, it's important to have a plan in place for how you will unify and then maintain your item records, including where you'll store it, what systems will share item data and more.

How GHX Adds Value
GHX Data Connect for Cloud uses automation for data management to tackle millions of item updates in your cloud ERP, automatically. No matter where an item is in its lifecycle, whether it's being managed in supply chain or the item is already being used in care, the information about this item is consistent and updates are automatically synchronized in your ERP through enhanced integration with GHX.

✓ **Choose an IT partner with deep healthcare supply chain and Cloud ERP integration expertise to better navigate change management.**
Look for a partner that takes the long view to fine-tune how processes and people work across multiple functions of the business. A partner skilled at driving collaboration among teams.

How GHX Adds Value
We are long-term partners because of the strategic value we provide. With two decades of established healthcare experience, we are strongly positioned to support you in change management and to help keep your implementation on track and on budget.

✓ **Select an IT partner with developed product roadmaps that align closely with your ERP partner.**
For on-time and on-budget implementation, it's critical that your IT partner is not only proven to work well with your Cloud ERP system, but that they also have API integrations and demonstrated success.

How GHX Adds Value
With APIs built through certified, trusted partnerships with the top ERP vendors (including Infor, Oracle and Workday) our integrations are seamless and predictable.

✓ **Select a partner that offers a suite or variety of solutions.**
Partners that provide a range of products that work well together help guarantee migration success and system operation after go-live.

How GHX Adds Value
Our solutions, including Exchange Enterprise for Cloud, GHX Data Connect for Cloud and Category Optimization for Cloud, help solve a range of supply chain, data and analytics needs—so you can effectively consolidate vendors, reduce your tech spend, and capture deeper-level savings long-term, while continuing to deliver excellent patient care.

It's Time to Integrate Supply Chain in the Cloud. **GHX Can Help.**

With decades of industry knowledge and comprehensive solutions built to integrate with the top ERP vendors, GHX has what it takes to support you every step of the way.
