

Multiply your savings potential with evidence

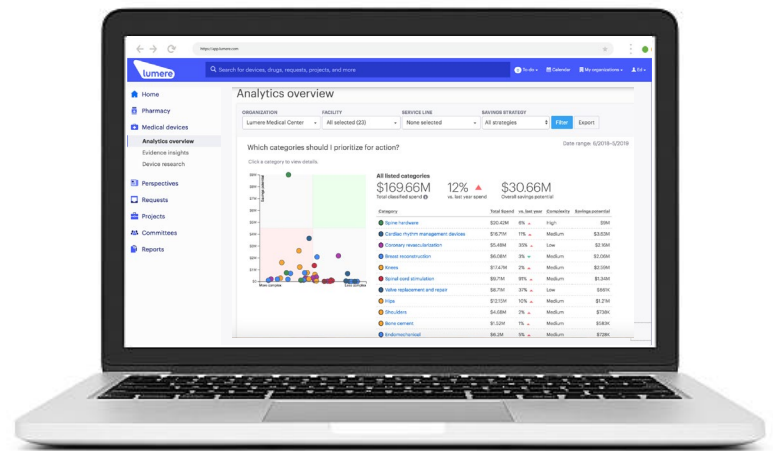

Lumere's web-based Category Optimization uses data pulled directly from your health system to provide evidence-based savings strategies, spend and physician utilization insights, and tracking capabilities to ensure accuracy and compliance.

Accelerate strategic sourcing initiatives

- **Evaluate savings opportunities** across 45 categories of physician preference items to prioritize initiatives with the highest financial impact.
- **Compare clinically and functionally similar devices** to reduce unwarranted clinical variation in device selection and appropriate utilization of premium-priced technology.
- **Identify variation in your physician's device usage** and have evidence-based conversations that put the focus on patient care, not cost savings.
- **Access objective medical device experts** to develop organization- and category-specific sourcing strategies and to enrich physician conversations with the latest market trends, evidence and device expertise.

Measure realized savings

- **View all categories and projects** in one place to see a full picture of spend and financial impact of your projects.
- **Monitor monthly spending** to ensure that vendors are fulfilling pricing commitments and that no unexpected or premium products are eroding expected savings.
- **Track progress** toward savings goals, ensure decision compliance over time and monitor for denied products captured in your PO spend.

"Lumere provides a **direct comparison** of products based on evidence, outcomes and technologies. This leads to **clinically integrated decisions** regarding sourcing strategies and vendor negotiation tactics, along with key insights to support clinical decision making, enhance outcomes and realize savings."

Michael Dankworth

Executive Director, Allspire Health
